

- 1a) Everything is clear about the course so far. Only suggestion I have at the moment would be to put homework documents/questions under assignments rather than course materials, as they would be easier to find that way.
- 1b) I looked through the Matlab links, - while I have used the program/software in the past, I found it to be somewhat challenging, so decided to spend time reviewing it. I also refreshed myself with LaTeX, while I've used it before it was only in passing. I did not encounter any issues or confusion with the links or homepage itself. My only suggestion would be to include more colors than just black and white on the website to improve readability. Overall, it will prove to be very useful (especially the recommended literature page).
- 1c) No problems encountered per se, but the document names seem to be confusing & perhaps our compliance in terms of their titles. I would personally prefer if the course material pages had less text directly written into the blackboard site. Rather, more information being provided within embedded documents could improve how navigable and coherent the pages ~~with~~ are.
- 2a) I found a pdf of the Misconduct policy (Undergraduates) online. The exact title is "UMBC Policy for Undergraduate Student Academic Conduct UMBC Policy #III-1.10.03".
- 2b) • collaborating on individually-assigned work • aiding/submitting assignment & resubmitting
• receiving unauthorized help • taking exam in place of another student
• giving answers to questions from people who have already taken the assignment
• fabrication of data or bibliography • helping another student w/ something falling under misconduct
• plagiarism (claiming others' work as one's own) • dishonesty (lying to students/professors, forgery)
- Best practices listed in green are particularly applicable to this course. Some of these are fairly general & apply to my course, but the biggest concern would be wrongly sharing answers in this course.
- 2c) Balancing collaborative learning without giving away answers/explanations can be challenging. I feel that so long as collaborative efforts / study groups focus on learning rather than getting good grades, this will not be an issue (providing exact answers to their problems etc. are not being shared). Study groups should be very helpful in learning, but should not interfere with the misconduct policy at all.
- 3) I would like to get on it but my minimum goal w/ this class is a B. I am prepared to work and study to achieve this, though the course may be very challenging.
